

Brian B. Gilmer, MD US Ski Team Physician

Karly M. Dawson PA-C Teaching Associate

REHABILITATION GUIDELINES FOR

FEMORAL OSTEOTOMY, ACL RECONSTRUCTION WITH PERONEUS LONGUS ALLOGRAFT, OPEN ALLOGRAFT OATS, LATERAL MENISCUS ALLOGRAFT TRANSPLANTATION, MICROFRACTURE

PHASE I (0-6 WEEKS POST OP) DATES:

Appointments	 MD follow up at 2 weeks for wound check, X-ray, stitch removal MD follow up at 6 weeks for X-ray and progress assessment Begin physical therapy 2-3 x/week within 2-4 days of hospital discharge
Rehabilitation Goals	 Full extension symmetrical to contralateral knee before the first post-op visit at 2 weeks PROM 0-90° 20° SLR without quad lag Maintain WB precautions Edema control Monitor for s/s of DVT/infection
Precautions	x 6 weeks for all: WB: NWB with crutches Brace: locked 0° for ambulation, brace open 0-90° at rest in sitting sleep with brace locked at 0, unlock 0-90 when becomes intolerable ROM: AROM/PROM 0-90 degrees Avoid putting a pillow under the knee
Suggested Therapeutic Exercises	 Prolonged extension: prone hang, supine with roll under ankle Heel slide, wall slide to 90 degrees Isometric quad set, then SLR Hamstring isometrics 4-way hip and ankle exercises Patellar mobilizations
Cardiovascular Exercises	Seated arm bike

REHABILITATION GUIDELINES FOR FEMORAL OSTEOTOMY, ACL RECONSTRUCTION WITH PERONEUS LONGUS ALLOGRAFT, OPEN ALLOGRAFT OATS, LATERAL MENISCUS ALLOGRAFT TRANSPLANTATION, MICROFRACTURE

Progression Criteria	 ROM 0-90 degrees, full ankle ROM MD clears patient to discharge brace and begin next phase via X-ray Good quad set Able to straight leg raise without lag
----------------------	--

PHASE II (6-12 WEEKS POST OP) DATES:

Appointments	 Continue physical therapy 2 x week, progress to 1 x week when PT deems appropriate MD appointment for X-ray and progress assessment at 6 and 12 weeks
Rehabilitation Goals	 Increase weight bearing progression per MD specifications DC crutches after 10 weeks when quad control returns, full extension achieved, stable with low fall risk Full knee and ankle ROM Increase functional weight bearing strength as able Core integration
Precautions	WB progression: at 6 weeks to 25%, go up 25% per week until full WB at 10 weeks (get cleared by MD and X-ray prior to starting progression)
Suggested Therapeutic Exercises	 If cleared for full WB: HEP 5x/week Begin closed kinetic chain exercises with knee flexion: Mini squat, lunges, bridges, sport cord, wall squats, step up/down Progress neuromuscular proprioceptive/balance exercises including single leg balance progression- varying surfaces Pool available: begin 4 way hip, lateral movement, deep water jogging in place (no freestyle or frog/breaststroke kick)
Cardiovascular Exercises	Stationary bikeArm bike
Progression Criteria	 Neuromuscular exercises without difficulty No dynamic valgus with exercises

REHABILITATION GUIDELINES FOR FEMORAL OSTEOTOMY, ACL RECONSTRUCTION WITH PERONEUS LONGUS ALLOGRAFT, OPEN ALLOGRAFT OATS, LATERAL MENISCUS ALLOGRAFT TRANSPLANTATION, MICROFRACTURE

PHASE III (3-5 MONTHS POST OP) DATES:

Appointments	Continue physical therapy 1-2 x/week
Rehabilitation Goals	 Running patterns at 75% speed Good jumping mechanics- NO DYNAMIC VALGUS Hop drills without difficulty
Precautions	No downhill walking/running, downhill skiing, downhill biking until 4.5 months
Suggested Therapeutic Exercises	 HEP 5x per week Agility drills: Shuffling Hopping Running patterns (Ex: figure 8) Sport specific closed-chain exercises: leg press (0-60°) step ups mini squats (0-60°) short arc quad (30-90°) hamstring curls light weight/high repetitions
Cardiovascular Exercises	 Begin endurance closed-chain exercises 3-4x/week Stairmaster, stationary bike, elliptical, NordicTrack (short stride) Focus on increasing endurance. Gait training Jogging on treadmill or even ground at 12 weeks, progress to running patterns at 75% Pool available: may start freestyle swimming (avoid frog/breaststroke kick), progress to shallow water jogging
Progression Criteria	 Running without knee pain or effusion Hopping/agility drills without knee pain or effusion

PHASE IV (: 5-8 MONTHS POST OP) DATES

Appointments	Continue physical therapy 2 visits per month to review HEP
--------------	--

REHABILITATION GUIDELINES FOR FEMORAL OSTEOTOMY, ACL RECONSTRUCTION WITH PERONEUS LONGUS ALLOGRAFT, OPEN ALLOGRAFT OATS, LATERAL MENISCUS ALLOGRAFT TRANSPLANTATION, MICROFRACTURE

Rehabilitation Goals (Phase IV continued)	 Slow progression from jogging on even ground or treadmill to running patterns, hill work, cutting, jumping, pivoting May begin plyometric program: jump rope exercises
Precautions	 Earliest return to sport = 9 months Must pass return to sport test
Suggested Therapeutic Exercises	 HEP 4-5x per week Return to sport testing at 9 months post-op, prior to MD visit Agility drills: shuffling, hopping, running patterns (Ex: figure 8) Sport Specific: plyometric program, fast straight running, backward running, cutting, cross-overs, carioca, etc. in controlled environment
Cardiovascular Exercises	Pool available: may advance swimming (avoid frog/breaststroke kick)
Progression Criteria	 Quadriceps and hamstring strength at least 90% of opposite leg Single leg hop test and vertical jump at least 90% of opposite leg Jog, full speed run, shuttle run, and figure of 8 running without a limp Full controlled acceleration and deceleration Squat and rise from a full squat No effusion or quadriceps atrophy
